

UriLift is a big success in Esbjerg, Denmark

Mads Peter H. Sørensen, Technical and Environmental Department:

We (all citizens in the town) are very happy with the UriLift. Every night at about 22.00 the UriLift is activated by personnel from a bar nearby (they have a remote). Next morning the street-sweepers clean it from empty cans, glass etc. and lower it down with their remote. They also activate the self-cleaning-system, so the UriLift is clean when it is activated in the evening. It is still looking just as good as it looks when it was new. No scratches and so.

The UriLift has been used everyday since the year of installing (2004). And it is being used a lot, specially in the weekends. We have practically no complains. It is used without problems. There has been some small maintenance on some of the hydraulic valves (noting last forever), but not many.

If clients are interested to have a look at the UriLift, they are welcome.
